

Company **Genesis Global**

Industry **Lotteries and Gaming**

Website **www.genesis.com**

Team **UX Designer, CPO, Product Manager Lead, DB Admin, Data Analyst**

My Role **Responsible for the entire project**

Genesis Global

Context

Genesis is a Casino operator who wants to become 100% data driven. Orchestrate several acquisition channels from a single platform and optimize the funnels based on data as much as possible.

Challenge

Ideate and apply an event-driven tracking system across all brands. The system has to take in consideration the self-exclusion from a brand and dispatch to other brands. A dashboard for data analysis.

New strategy to optimize conversion rate on acquisition campaigns.

Solution

Google Tag Manager and the use of its Zones was the right solution to have all the tracking managed in one place, and be able to propagate to a network some specific events.

More than a new strategy, I decided to optimize the Snapchat campaign the company was already running. Mainly due to the fact during a meeting with marketing there was a discussion ongoing which caught my attention, and I was curious to investigate.

The video was working and the main copy too. What was totally messing up the
