

Process

1

Research

While researching on the competitor's product, I've started thinking about the huge lack of social features in ATG's product. Something was crystal to anyone in the team at the end of this phase. We managed to collect enough data to support the design phase, but most important we already had few interesting ideas to validate during the design sprint.

Deliverables

- Competitor Analysis
- User Interview
- User Flow
- User Journeys
- Functionalities mapping

2

Problem framing and resolution

We applied GV Design Sprint, my role was Facilitator.
Day 1: Goals, Problems map, How Might We, Target
Day 2: Notes, Ideas, Crazy 8s, Solution Sketch
Day 3: Storyboard
Day 4: Prototyping
Day 5: User Testing

Deliverables

- Day 1: Problem to solve
- Day 2: Possible solutions
- Day 3: Storyboard
- Day 4: Prototypes
- Day 5: Data, Validation
- Lo-Fi Wireframes
- Hi-Fi Wireframes

3

MVP and more testing

The team developed a Proof of Concept of the designed game. We used tons of already developed components to make it happen in 4 weeks time. The result was actually more than a simple MVP, it was an Awesome Viable Product and so we decided to test it in a beta program, asking some selected customers to take part to the beta program.

Deliverables

- Prototype
- MVP
- Usability test report
- Heuristic analysis
- Project validation
