

Company **Legolas Invest Limited**

Industry **Lotteries and Gaming**

Website **www.legolas.bet**

Team **UX Designer, 3x UI Designer, 2x Pool betting Analyst**

My Role **Research, Design Sprint Facilitator, Wireframes**

Context

The company target is trotting bettors, mainly pool betting. At that time Legolas was providing in addition to horse racing bets and pool games, also several classic betting verticals such as Sportbook, Casino, Live Casino with no great return in terms of visibility and money.

Challenge

Starting from the target nice, ideate and design a new sport game based on soccer matches taking advantage of the pool betting methodology.

Solution

The research for this project started immediately analysing all the pool games soccer-based available on competitors or other providers websites. We quickly realised the necessity for the game to be based on rules already known to pool bettors, this to improve the initial engaging and decrease the cognitive load required by learning a new way of betting.

After a few test run from the analysts, who were testing the possible ROI and the total cost of the operation, we opted to use Footy as base rules for the game.
