

# Process

1

## *Research*

I've mainly conducted user interviews and surveys directly from the platform using Survey Monkey. The issue was real and the cognitive load to navigate from one sport to another was quite high. Moreover, all our competitors were offering a better solution than us in terms of navigation.

## Deliverables

NPS  
User Interview  
User Flow  
User Journeys

2

## *Design*

I've checked all the data from analytics to filter what feature was really useful and not present/hidden behind the Off-canvas menu. Identified the most ones, I've experimented different solutions to find the correct fit between brand guidelines and human needs.

## Deliverables

Lo-Fi Wireframes  
Hi-Fi Wireframes

3

## *Prototyping and testing*

Transitions and micro-interactions are the core of a prototype. I've spent all the available time from this phase to animate my solution so that I could be able to run a test on it with real users.

## Deliverables

Prototype  
Usability test report
